

WHAT IS CLAIMED IS:

1. A fixing structure of an intake manifold, comprising a boss part integrally formed with a throttle body mounting flange configured to be coupled to an engine block via a locking bolt, said throttle body mounting flange being integrally coupled to
5 an intake manifold.
2. The fixing structure as defined in claim 1, wherein a portion of said engine block contacting with said boss part is a lateral side of a transmission mounting flange of a rear cylinder block.
3. The fixing structure as defined in claim 1, wherein said boss part protrudes out
10 at the bottom of said throttle body mounting flange toward said cylinder block.
